

VILPRA WOOD - EXTERNAL WOOD BURNING HEATER

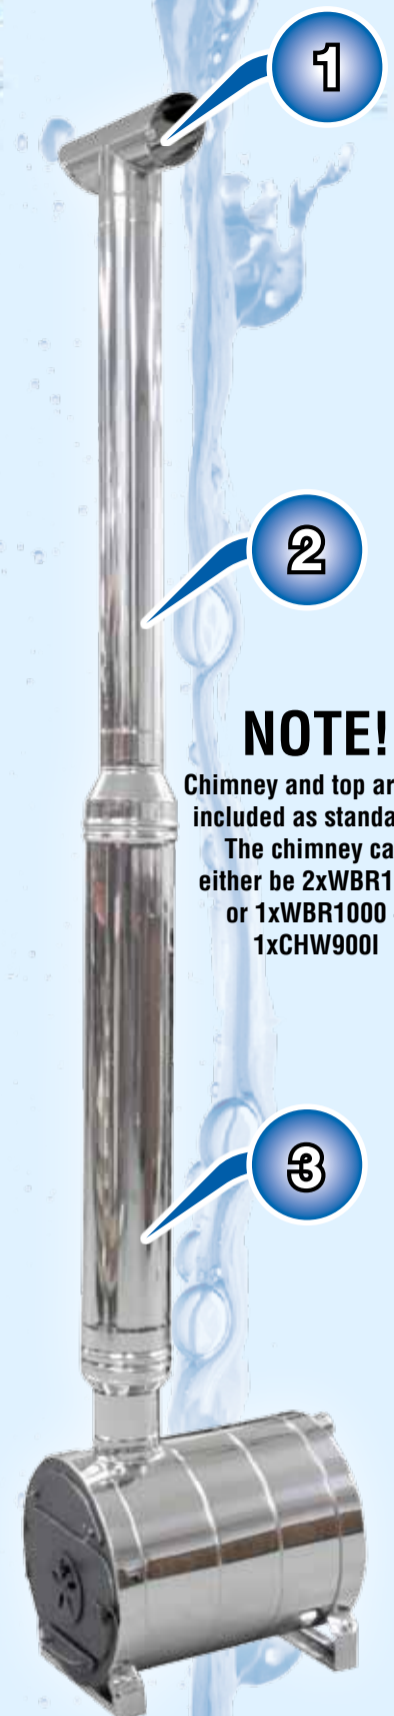

This is a heater meant to be placed outside the Tub. This has many advantages: the Tub is more compact and yet there is more room for you in it, in addition, less water is used and so the water heats up more quickly. Placing the heater outside also enhances the safety of operating your Tub. Not to mention the fact that assembling your heating system is now much easier.

The water is heated using the principle of convection whereby the hot water rises into the Tub and the cooler water is drawn into the heater to be heated.

VILPRA WOOD

Due to the effective circulation the water temperature remains the same in the whole Hot Tub. No stirring is required.

NOTE!

Chimney and top are not included as standards. The chimney can either be 2xWBR1000 or 1xWBR1000 + 1xCHW900I

- 1. Chimney top (WBRT)**
The Vilpra chimney top is connected to the chimney pipe for Vilpra Wood. It is formed so that it effectively removes sparks and prevents rain from coming down in the heater.
- 2. Chimney pipe (WBR1000)**
Stainless steel chimney pipe that is connected to the Vilpra Wood. The length is 100 cm and can be extended in order to reach the optimal height. The height can vary depending on the surroundings. Normally the 2 pipes included in the packet are enough.
- 3. Insulated chimney pipe (CHW900I)**
An insulated chimney pipe for connection to a Wood-burning heater for a Hot Tub. Diameter 110/160 mm. Total length including fitting parts is 115 cm. The upper chimney pipe WBR1000 and the chimney top WBRT are not included.
